# Java Angular: Product Management App

This is a very simplistic product management application, designed to implement the following CRUD operations:

- Retrieve the list of all products
- Add a product to the list
- Fetch a specific product details
- Update a specific product
- Delete a product

Here are some screenshots of the application.
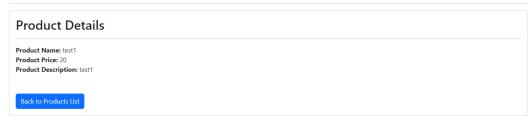

1. Product List

2. Create Product

3. Product Details

Product Management Application

Product Details

Product Name: test1
Product Price: 20
Product Description: test1

Back to Products List

4. Update Product

Product Management Application

Update Product
Product Name
test1
Product Price
20
Product Description
test1
Submit

5. Delete Product

Product Management Application

Product List

Product Name	Price	Delete/View		
test2	21	Delete	Update	Details
test3	52	Delete	Update	Details
