Tinder Clone done with React Native, Swipeable Tinder cards, Native Navigation

Project description:

This is the documentation for the dating application **TINDER**. This application is for **demo** and **educational purposes** only.

Not all of the application's functionalities are necessarily reproduced in their entirety, as we are concentrating essentially on the main functionalities in the interests of time and difficulty. As these applications are not commercialized, it is neither useful nor necessary to reproduce the entire application, but only a part of it, in order to apply the basic **React Native** framework.

> ⚠️ **To avoid making you feel uncomfortable, I don't know if you're a man or a woman, here you don't need to log in and we don't record your actions. Only the swip functions are reproduced for the moment, and a chat has been created. However, I haven't finished it yet.**
>
> **I don't need to tell you much more, I think you know how it works, so I'll let you try it out.**
